

HCI & Computer Graphics

ASSIGNMENT NO: 1

NAME: ABDUL QAYOOM

ROLL NO: 2K24/CSE/12

SUBJECT: HCI & COMPUTER GRAPHICS

CLASS: 3RD YEAR PE

SUBMITTED TO: SIR RAJESH KUMAR

1. **Search Bar** – Used to type and search for a specific location or address on the map.
2. **Compass tool** - Used to show and adjust the map's direction and orientation
3. **Zoom Controls** – "-" and "+" buttons allows user to zoom out or zoom in on the map.

1. **Shadows (Light Source)** – Shadows cast by buildings show the light direction and add a sense of height/depth.
2. **3D Geometry (Perspective View)** – Visible building sides from an oblique camera angle create real 3D depth.
3. **Texture Mapping** – Photo-realistic textures applied to building surfaces make the flat 3D mesh look real.

Reflection

Shiny surfaces like water, glass, or building windows in Google Earth show a mirrored image of nearby objects (like sky or buildings), which makes the scene look more realistic and helps show which surfaces are smooth or wet.

Step 3: Answer 2 Short Reflection Questions

1. How does the Computer Graphics quality (e.g., realistic lighting or 3D view) help or hinder the user's ability to interact with the software?

ANS: - Realistic lighting and 3D views help users understand locations and building shapes more clearly. However, too much visual detail can sometimes make the map look crowded.

2. What is one simple HCI change you would make to improve the user interface?

ANS: - I would add clearer labels or tooltips to important buttons so users can understand their functions more easily
